A-Weighted Years to Maturity calculation is based on individual par value divided by total long term investment par value multiplied by the remaining number of year(s) to full maturity.

B-Weighted Years To First Call/Maturity calculation is based on individual par value divided by total long term investment par value multiplied by the remaining number of year(s) to full maturity, or to the first call date if applicable.
When an investment passes the first call date the calculation is adjusted based on date of final maturity.

C-An Overnight Contractual Rate is provided for overnight investments (BoCC Concentration and BoCC Investment Accounts) pursuant to contracts with First Florida Integrity Bank. Concentration Account Rate is indexed at 95% of the daily Effective Federal Funds Rate with a floor (minimum) rate of .25%. The Investment Account Rate is the current Fed Funds Rate, as published in the Wall Street Journal. The SBA Florida LGIP rate is the current Participant Yield as published on the SBA Florida Prime website. A term rate is provided for the certificate of deposit (CD) pursuant to contract with Florida Community Bank (FCB). The rate is locked in for the term of the CD and the CD does not have an early withdrawal penalty.

D-Coupon Rate is taken from the respective investment trade tickets. Step coupons, if any, are shown at their current rate.

E-Coupon Weighted Yield calculation is based on individual par value divided by total long term investment par value multiplied by the coupon rate.

F-Purchased Yield is taken from the respective investment trade tickets and is based upon yield to worst, or the minimum yield the investment will achieve.

G-Weighted Purchased Yield calculation is based on individual par value divided by total long term investment par value multiplied by the Purchased Yield.
